HOW TO REMEMBER THE WAR

OP/ED

By Gwynne Dyer • Originally published November 5, 2018

“If they are not remembered, was the sacrifice they made even worthwhile?” asked an American veteran of the Iraq War who named his son after a fellow soldier who was killed there. It’s quite common, actually. My brother-in-law is named after a member of his father’s bomber crew who was killed over the Balkans in 1944. But the Second World War is still just within the reach of living memory.

This week we are asked to commemorate the hundredth anniversary of the end of the First World War. That is no longer memory; it is history. The images are familiar and some families have names and even pictures of relatives who died in the war, but very few people now alive ever knew them personally.

So how should we commemorate the war? There’s not too much rhetoric about glory any more, thankfully – we have grown up a bit – but a lot about sacrifice. That’s a safe subject, although the majority of the soldiers

who fought in the war had no choice about being there.

Just under the surface, however, almost everybody now realises that the First World War was a huge, pointless waste of at least 11 million lives. Many people knew that even at the time. Yet nobody knew how to stop it at the time, and we in the present don’t really know what to say about it.

The best use of the brief interval of contemplation about war on 11 No

A KICK-START ON OUR PATH TO LOWER EMISSIONS OR LET'S GET TO IT

By Emily Guinane

COMM
NOTES

Our final forum in the One Planet – One Island series is dedicated to formulating what our next steps are in our efforts to halt climate change. On Tuesday, November 13th we will extend the forum to run from 6:30pm-9:00pm and we are going to let our discussions fill every nook and cranny of the school. To create a format where the diverse possibilities for action can all be brought forward and discussed we are going to run the forum using a meeting technique called Open Space. The informative website openspaceworld.org says that “Open Space works best when the work to be done is complex, the people and ideas involved are diverse, the passion for resolution are high, and the time to get it done was yesterday.” Sounds like the issue we are dealing with right?

During the forum you will be invited to initiate a session by writing down your burning question, passionate issue, or great idea and posting it on our Community Board which lists all the locations where sessions will take place. Once all the ideas are presented, everyone can choose which of the sessions they feel called to attend. Further details will be explained on the night of the forum.

Drawing on all that we have learned during our six forums leading up to this evening, and all the things you knew before, what would you really like to see happen? Maybe it is time for a train running up and down Vancouver Island? How do we get the government to encourage the

big changes that need to happen? Would it be possible to have an energy co-op on Denman? We are excited to learn about the ideas brewing in your brains and hearts.

If you missed out on the forum on Tuesday October 30th do not worry, Dr. Ron's summary follows here! The air in the school library was palpable with expectation as the Plastic free Denman group took the lead at our week focussing on Plastics and what we can do. Dr. Ron started by highlighting that the production of plastic in the world is currently on a trajectory that is increasing. Both the production and waste of plastics are a leading cause of carbon emissions. We need to act now to reverse this trend.

The focus of the evening was on single use plastics. We were taken on a journey of positive initiatives around the world to reduce the use of plastic bags and straws and other single use plastics. Twenty different initiatives to reduce and in fact ban the use of single use plastics from the European Union down to Vanuatu were highlighted.

Next, a report on Motion 151 put forward by our MP, Gord Johns, was shared with the group. This is a motion to develop a national strategy to combat ocean plastic pollution. During the presentation in Parliament by Gord Johns he mentioned ADIMS several times as much of what he was proposing was based

vember, therefore, is to try to understand what kind of phenomenon it is. Start with a simple question: where does war come from? The answer is equally simple. Human beings didn't invent war; they inherited it.

Our branch of the primate family has always fought wars. If there is an original sin, it goes back beyond the time when the chimpanzee and human lineages split 5 million years ago. (Chimpanzees still fight wars too.) So forget about the 'causes of war' in the history books. Every kind of human society, with every imaginable kind of economy, has fought wars.

Second question. How did war get so big? The First and Second World Wars were far more destructive than previous wars, and the Third World War (if the Cold War had ever

turned hot) would have been at least ten times bigger than that.

When the size and resources of a society grow, it ends to fight bigger wars just because it can. The issues at stake are not bigger than before, but losing a war is so unappealing that countries generally won't quit until they have thrown all their resources into it.

And finally, how can you tell when some stupid little thing like an assassination in Sarajevo is going to blow up into a 'world war' with all the trimmings. Answer: you can't. Which brings us to the Power Law.

People want a big disaster to have a big cause and a recognisable villain, so people writing about the outbreak of the First World War try hard to find some country to blame. If they are writing in English or French they generally blame Germany, which allegedly wanted the war and made it happen. But that's nonsense.

The Power Law describes how so-called "critical systems" like those that produce earthquakes and forest fires are completely indiscriminating about the scale of the event. Most events will be on the smaller side, but you don't need special causes to get a huge one: literally any size of event can happen at any time.

A critical system is one that is inherently unstable, and locks in more and more instabilities as time goes by. Think of the accumulating stresses along a fault line between two continental plates, or the accumulation of inflammable debris on the forest floor. From time to time there will be earthquakes and forest

fires, but most of them will be small. The Power Law says that any one of them could be the Big One.

To know if a particular class of events is subject to the Power Law, you just graph the scale of the events against their frequency. If it turns out to be a straight relationship where doubling the size of the event decreases the frequency by half – or makes it four times less likely, or sixteen times, or any other power of two – then you are dealing with a critical system.

In that case, you can forget about seeking major causes for bigger events. A random pebble is sixteen times less likely to cause a huge avalanche than a little avalanche, but it can cause either.

Jack Levy, in a massive 1983 study entitled War in the Modern Great Power System, measured the size of every war in the past 450 years by its casualties, and found that doubling the size exactly halves the frequency.

This means that great wars do not need great causes. Once sufficient strains have accumulated in a critical system, a world war can strike out of a clear blue sky, as it did in the summer of 1914. Or now, for that matter.

on suggestion from ADIMS. Way to go ADIMS!

Next up a primer on Recycling. It turns out that Denman has 70 Tons of waste annually that gets sent off island to the landfill. We also send 30 Tons off island to be recycled. It turns out that when it comes to plastics, although BC does well we still actually recycle only 10% of the plastic we use. The clear solution: USE LESS PLASTIC.

How can we aid in using less plastic? Well, Denman has some new ways. One is by not placing our grocery items in plastic bags when we shop.. Instead, buy in bulk and use glass containers. Consider using a bamboo toothbrush available at Felt and Fibre, and beeswax coated cloth for covering leftovers in the fridge. Donna is continually bringing in bulk items at the Earth Club factory. One can simply drop in and fill up with your own non-plastic containers at the Guest House. Finally, check out the Plastic Free Product Directory for additional non plastic items and where to get them.

The evening ended with a clip from David Attenborough who produced the series on Planet Earth who simply stated: "You may not think as an individual you can make a difference, but when we put millions of individuals working together in small ways, we can make a big difference". So every little bit counts. Thanks to A Plastic Free Denman for a wonderful, inspirational and practical presentation .

HORNBY ISLAND BY-ELECTION TO BE HELD IN NEW YEAR

COMM
NOTES

By Islands Trust

VICTORIA • The October 25th resignation of Tony Law from his position as trustee for the Hornby Island Local Trust Committee and the Islands Trust Council will trigger a by-election.

The Islands Trust is currently seeking to appoint a chief elections officer to administer the election and re-establish the election process. The Islands Trust will formally announce the date of the by-election as soon as possible.

"The procedures governing a local by-election are defined by the Local Government Act," explained Chief Administrative Officer, Russ Hotsenpiller. "There are no short cuts

and due process must be followed. The election itself must take place within 80 days of the appointment of a chief elections officer. Obviously, it is unusual to be conducting a by election so soon after a general local election. We are working hard to make sure that the election takes place as soon as possible."

Until the by-election is held, the Hornby Islands Local Trust Committee will continue to meet and perform its functions with Trustee Alex Allen and a chair appointed by the Islands Trust Chair. The name of the Hornby Island Local Trust Committee chair will be confirmed on November 14, 2018.

HORNBY TAX-REFUNDED BUDGETS FOR APPROVAL NOV. 14

COMM
NOTES

By Reina LeBaron, HIRRA Administrator

Hornby Island Residents' and Ratepayers' Association (HIRRA) will be holding their annual Budget meeting on Wednesday, Nov. 14, 2018, 7:30pm, at NEW HORIZONS CENTER. Seven HIRRA Committees manage essential local services funded by Comox Valley Regional District tax monies via a

five-year service agreement contract with HIRRA. Once a year, HIRRA hosts a meeting to publicly review, discuss and approve the upcoming budgets for these services: Fire Protection (HIFR), Community Hall, Recycling/Waste Management, Rec

...continued on Page 6...

Photo by Chris Seguin

... continued from Page 5 ...

reation, Comfort Stations, Regional Parks/Trails, Invasive Weed Control. The HIRRA Property Management budget will also be presented for approval.

DRAFT five-year budgets are available for viewing on the website: hirra.ca

All HIRRA members are encouraged to attend and get informed about your tax dollars at work in your community. New residents, ratepayers and guests are also welcome as non-voting participants.

Also on the agenda: a report from the Executive; a report on the status of a feasibility study to explore a proposed secondary processing facility to sterilize composted material from composting toilets (Humanure Project); and an Islands Trust update. HIRRA offers a unique opportunity to participate in direct democracy local decision-making.

GOT PAIN? TRIED SOMATICS?

By Rob Selmanovic

COMM
INFO

If you have never heard of “Somatics”, you are not alone. Let me explain ...

The idea of a concise, compelling description of ‘Somatics’ that can be communicated in the short span of an elevator ride makes good sense.

It makes good sense because, as a Somatics educator, I am often asked: “What exactly do you do?” or, “What is Somatics?” and “How does it work?” So often, I am met by that bewildered gaze whenever I dare mention that “word”.

As a longtime yoga instructor, the elevator pitch has been much easier, if even necessary. Most people have at least some general understanding of what’s involved in the practice of yoga. Somatics, however, is different.

Although, like yoga, Somatics is a body-centered practice that incorporates slow deliberate movements and conscious attention, that is where the similarity ends. Where most styles of yoga place emphasis primarily on postures, Somatics is more focused on movement, placing function over form.

My elevator pitch needs to explain who this practice is for and why someone would choose

to do it. I could start by explaining that Somatics is for anyone who wants to feel the freedom of a body that is pain-free, moves well and ages gracefully.

I teach Somatics to individuals and groups – from youth to seniors – so they can regain voluntary control over their own neuromuscular system. Since most conditions, including muscle and joint pain, limited mobility and poor posture, have been learned and habituated, they can be un-learned and corrected.

What this means is that anyone can take charge of their bodies, their health and their wellbeing – for themselves! It means that Somatics, unlike many other practices and therapies, can create long-term lasting change.

I’m sure I can blurt that much out on a short elevator ride.

Somatics movements and exercises are gentle enough for most body

... continued on Page 7 ...

... continued from Page 6 ...

types to do without risk of injury. It does not require intense stretching to try to release muscle tension. Instead, Somatics involves the brain and nervous system to lengthen and re-educate muscles that have become involuntarily contracted.

As you can see, the elevator ride is getting longer and I still haven't really explained what Somatics is.

I haven't said anything about how the sensory cortex of the brain is awakened through slow intentional movements that enhance somatic awareness. Nor have I described how the motor cortex responds accordingly to correct, improve and refine function.

There is more to say and the elevator is still rising.

I must mention how, with Somatics, we can identify and resolve particular muscle reflex patterns that our bodies may be locked in. Patterns that cause misalignment resulting in functional limitations and pain. I need to explain how this method of neuromuscular re-education will increase mobility, range of motion and

allow the body to function more efficiently. The natural outcome of this is more energy and increased vitality.

I want to go on about how using minimal effort is encouraged, rather than pushing or striving. I might even start in about all of the conditions Somatics is effective in resolving, from back pain to sciatica to shoulder issues to TMJ.

By now the elevator is filling up and I can't contain my enthusiasm for Somatics. Every curious ear in that car will be listening and wondering about their own aches, pains and other complaints. Why have they not heard about this before now? And can Somatics really help them with that achy hip, sore neck and cranky knee?

My answer is a resounding YES!

It is no surprise that Somatics cannot be adequately described during the short span of an elevator ride. The elevator pitch is an ironic metaphor for the expansive, relaxed nature of Somatics. The very essence of this practice is learning to slow down, create space to feel and experience sensation that has been diminished or lost. Rushing or abbreviating that process is counterproductive and will only inhibit the results.

The way to really know Somatics is to take the ride. Have the experience

to see and feel for yourself. Like the slow steady climb of the elevator car, or the safe smooth descent, Somatics is a journey worth taking that will surely move you and your precious body to a new and healthier place.

Rob Selmanovic is leading Somatics for Pain-Free Living at Kingfisher Resort & Spa in Courtenay on November 17, 2018 (12 noon – 4 pm).

For more info visit: www.soulworksbodewisdom.com or 250.285.2299

I'M GOING TO SCREW UP SOMETIMES

By Leo Simmons

ARTS&LIT

I'm a dinosaur, I know. I carry no huge bony plates upon my back, my neck isn't twelve feet long, and my arms are neither too short nor puny for me to be able to pick my nose, but I am from another time.

My life could be split into different epochs, much like the Jurassic, Devonian or Cambrian (and if they're in the wrong chronological order, I shall huffily claim that such was my original intent).

In my case, first came the racist epoch. I was raised in a very white household in a very white part of England. I can still remember the first time I saw a black person in my home town, because as a child of eight, I stopped and stared. My parents (and therefore the rest of us) regularly used racial slurs in conversation, told one another racist jokes and laughed at overtly racist comedy on TV (there was a lot of it on TV in England in the 60s and 70s). And then, one day, I met a person of colour. Finished.

Then there was the homophobic epoch, which also began in childhood (once again in the parental home) and was nurtured in the poisonous atmosphere of single-sex education. It persisted into my late 20s, when the universe gave me a good shake to show me some sense. That shake came in the form of two gay neighbours (whom I had immediately regarded with a mix of suspicion and dismissive contempt), who, to my surprise, turned out to be two of the

kindest and warm-hearted people I had ever met. Finished.

The sexism epoch arose from fear. Having been utterly comfortable in the company of girls as an elementary school kid (apart from that time, aged seven, when Mandy Thompson told everyone who could hear that she would be sick on me if I kissed her), during my adolescent years and that single-sex schooling, things changed. I became terrified of girls, and the potential for rejection by them. As I grew older, I avoided contact with females (especially the ones I found attractive), and regarded them as unreachable and beyond understanding. When I fell in love for the first time, those blinkers began to shrink away from my eyes. Finished.

Now, in my mid-fifties, I face another opportunity to learn. I speak of my mild confusion – if that's the right word – around current attitudes towards gender; I've always been slow off the mark. The issue isn't my understanding that gender is a far more fluid and dynamic concept than I was ever taught; I have learned that my map of the world was not the world. The difficulty I experience – and I get it that many, many people are way ahead of me on this – is that my instincts are still programmed for a two-gender world.

I see someone dressed in traditionally male garb, and my instincts say: "That's a man." Likewise for someone wearing what I identify as traditionally female clothing: "That's a

woman." It has nothing to do with my respect for a person's gender identity, and everything to do with fifty-plus years of social conditioning. I'm not sure that this can be judged; it simply is. My instinctive responses are beyond my control, although with time, and my immersion in a new, more inclusive society, I'm optimistic that things – like my racism, sexism and homophobia – will change. But from time to time, as I make progress with this, I know I'm going to screw up.

My hope is that my relatively minor difficulty will not be misinterpreted as some kind of 'anti' prejudice. This is still a new concept for me. It's a new thing for my reptile brain (I told you I'm a dinosaur) to learn about and – here's the crux of it: to become accustomed to.

Most changes in my life have dawned upon me retrospectively – that is; the realisation that I have changed tends to come into my awareness some time after it takes place. This helps me be optimistic about adapting to change now and in the future, and I'm resigned to living the idea of: 'I'll know it's real when it's been happening for some time without me noticing.' I'm sure that my old ideas about gender will evolve to meet the reality of our world; they have to. While I'm waiting for the process to complete, I need to be aware of the possibility of unintentionally offending some people through my momentary lapses of awareness. I'm considering wearing a badge...

LOOKING TO THE NIGHT'S SKY

By Chris Seguin

**SPECIAL
INTEREST**

Well, folks, it looks like November isn't a month for astronomical observations – at least of backyard-amateur persuasion. Our planetary neighbour, once removed, Mercury is at its highest point on Earth's horizon – Greatest Eastern Elongation, in astrospeak. This is the best time to observe Mercury in the western sky, just after sunset.

November is also the month in which the Leonids meteor shower visits our night's sky. The meteors seem to come from the constellation Leo – averaging around 15 meteors per hour. But the Leonids is a unique example of a meteor shower in that it is cyclonic. Every 33 years the shower reaches a peak which produces 100s of meteors per hour. The last peak was in 2001. The meteors are the result of the Earth passing through the dust tail of comet Tempel-Tuttle, discovered in 1865. Meteors can be viewed throughout the month with the best viewing being after midnight on the 17th when they peak.

There's not much else to report. So, I would like to ask those who read this column to send in ideas that they would like to know more about when it comes to astronomy

and cosmology. I'm definitely not an expert – but I will do my best to suss out the answers to your queries. So, please email the Grapevine with your questions and ideas and we'll see what happens.

COMMUNITY NOTICES

HIRRA BUDGET meeting: Wednesday, Nov. 14, 2018, 7:30pm, at NEW HORIZONS CENTER. Agenda: Executive report; 2019 BUDGET MOTIONS: HIFR, Community Hall, Recycling, Recreation, Comfort Stations, Regional

Parks/Trails, Invasive Weed Control, Property Management; Report on Humanure Project; Islands Trust update. Participate in local decision-making!

HUGE THANK YOU to the community members who came to the Denman Farmhouse Presentation/Q & A. We really appreciated the large turn out, questions asked, and recorded all the feedback received. If you couldn't attend, or have additional comments since the meeting, please submit your feedback through our website link below. There will be more opportunities for community consultation and updates as the project moves forward. Thank you for your interest in the project!

REMEMBRANCE DAY at the Farmer's Market!! Saturday November 10th at the Hornby Community Hall, 11am to 2pm, Vendors doors at 9am, \$10.00 per spot. Lunch by Liz Earle.

LOST & FOUND

STILL MISSING, FADED RED CANOE about 15 ft, metal gunwale, with a black K & M painted on it. Last seen on sandpiper beach, H.I.s Aug. 28. We suspect a joy ride that left it abandoned or adrift. Please call Katy Helliwell at 250-335-3245 or email katytraveller@yahoo.com if seen.

FOUND FIT BIT Gladstone Way trail. Edi or Graeme 335-2689

WE FOUND A PAIR of Silver metal frame (prescription?) eye glasses by our gate, possibly dropped by someone picking up "free" stuff near 5555 East Road - Shannon Ford's Studio 250-335-5533

NOTICES

THE TOY STUDIO is now open by appointment until December 22nd. Call Christiane at Tel 250-335 1844 www.silkgeltandwaldorftoys.com

ROOM MATE WANTED

ROOM MATE NEEDED for Dec. 1st. \$600/month - includes rent, hydro, internet, phone and heat. Call Ruth 335-2993.(DI)(07/26-11/01)

FREEBIES

FREE! UPRIGHT PIANO (Baby Grand). Fabulous sound, will need tuning after the move. Sad, but my arthritic hands can't play it anymore! Call Leslie 335-2918.

COMING SOON

We are planning on resurrecting an old gem from previous years the **CONSIGNMENT CORNER**.

This would feature a "don't pay until it goes" with the payment being a percentage of the price the items is finally sold for. Another bonus is the option to have a small photo included alongside a description of the item.

For more information please contact the Grapevine at 250-335-1794 or theislandgrapevine@gmail.com.
